## 1 Abstract

The DICONDE ${ }^{1}$ Standard offers a lot for saving result pictures, which are already rendered, but lacks a little bit when it comes to RAW-Data. This Proposal introduces a new IOD, combining the Ultrasonic IOD and the Waveform IOD from the DICOM ${ }^{2}$. It was developed at the Fraunhofer IZFP in Saarbrücken from the named Authores and is currently WORK IN PROGRESS!.
We aim to standardize our proposal at the ASTM, but this is not yet done! So use this at your own risk! This may or may not change, and may or may not be standarized in the future.
